PREFACE

This Companion Guide is intended to serve as a Companion Guide to the ASC X12N 005010X279A1 TR3, adopted under HIPAA, which clarifies and specifies data content when exchanging electronically with Ingenix Claims Integrity and Connectivity (CIC). Transmissions based on this companion guide, used in tandem with the 005010X279A1 TR3, are compliant with both X12 syntax and those guides. This Companion Guide is intended to convey information that is within the framework of the ASC X12N 005010X279A1 TR3 adopted for use under HIPAA. The Companion Guide is not intended to convey information that in any way exceeds the requirements or usages of data expressed in the TR3.

CHANGE SUMMARY	217

1. INTRODUCTION

This section describes how the ASC X12N 005010X279A1 TR3 adopted under HIPAA will be detailed with the use of a table. The tables contain a row for each segment that a payer has something additional, over and above, the information in the TR3. That information can:

1. Limit the repeat of loops, or segments
2. Limit the length of a simple data element
3. Specify a sub-set of the TR3's internal code listings
4. Clarify the use of loops, segments, composite and simple data elements
5. Any other information tied directly to a loop, segment, and composite or simple data element pertinent to trading electronically with CIC

Scope

CIC is publishing this Electronic Data Interchange (EDI) 270/271 Eligibility Benefit Inquiry and Response Companion Guide to accompany the Health Care Eligibility Benefit Inquiry and Response TR3 for the ASC X12N 005010X279A1.

The TR3 provides general information about EDI transmission, such as delimiters, enveloping and related topics. This CIC Companion Guide will not duplicate these efforts.

HIPAA TR3's available through Washington Publishing, Inc. at:

<http://www.wpc-edi.com>

Providers, billing services and clearinghouses are advised to use the ASC X12N 005010X279A1 TR3 as a basis for their submission of Eligibility and Benefit inquiries. This Companion Guide should be used to clarify the business rules for 270/271 data content requirements, connectivity, response time and system availability.

Overview

The purpose of this document is to introduce and provide information about the CIC solution for submitting real time 270/271 transactions.

What is CAQH?

CAQH stands for The Council for Affordable and Quality Healthcare. It is a not-for-profit alliance of health plans, provider networks and associations with a goal to provide a variety of solutions to simplify health care administration.

What is CORE?

The Committee on Operating Rules for Information Exchange (CORE) is a multi-stakeholder initiative created, organized and facilitated by CAQH. CORE's Phase I goal is to create, disseminate and maintain operating rules that enable health care providers to quickly and securely obtain reliable health care eligibility and benefit information. Phase II is to provide the same functionality for claim status information. CORE operating rules will decrease the amount of time and resources providers spend verifying Patient eligibility or claim status and other administrative information at the point of care. CORE operating rules, envisioned to be introduced in multiple phases, have support from health plans, medical professional societies, providers, vendors, associations, regional entities, standard setting organizations, government agencies and other health care constituencies.

What is CAQH/CORE certification?

Any entity that creates, transmits, or uses eligibility or claim status data is eligible to become CORE certified. CORE certification indicates an entity has signed the CORE pledge and successfully completed certification testing, both of which are designed to demonstrate an entity's compliance with the entire CORE Phase I and Phase II rules. Any entity that agrees to follow the CORE operating rules will be expected to exchange eligibility and benefits or claim status information per the requirements of the CORE Phase I and Phase II rules and policies, with all its trading partners. Given the requirements of the CORE Phase I and Phase II rules, use of these rules by the industry will enhance the usability and content of the eligibility and claim status transactions as well as decrease administrative costs and resources:

Additional Information

System Maintenance Schedule

Thursday: 9:00 PM MT – 11:30 PM MT

Sunday: 9:00 AM MT – 12:00 PM MT

Holidays

Real-Time system processing is still available through CIC on the following holidays, but the Service and Support organization will be closed or not available. If New Year's Day, Independence Day, or Christmas Day falls on a weekend day, contact Service and Support for the exact day that CIC will be closed:

New Year's Day

Martin Luther King, Jr. Day

Memorial Day

Independence Day

Labor Day

Thanksgiving Day

Day after Thanksgiving Day

Christmas Day

2. GETTING STARTED

Transmission Administrative Procedures

Real time requests must include a single inquiry or submission (e.g. one eligibility inquiry to one information source for one patient). In this model the response from the message receiver is either an error response or the corresponding X12 message response (e.g. a TA1, 997,999 or 271 if the request was a 270).

Re-Transmission Procedure

A duplicate transaction may be sent by the provider if the HTTP post reply message is not received within the 60 second response period.

3. TESTING WITH CIC

CIC has adopted the *Workgroup for Electronic Data Interchange (WEDI) Strategic National Implementation Process (SNIP) Testing Sub-Workgroups* recommendations on the types of testing that needs to occur in order to remain in line with the health care industry's testing recommendations. CIC has selected Claredi for HIPAA transaction validation, compliance and testing. Initially, the types of testing that CIC recommends for the 270 transaction set includes:

Type 1

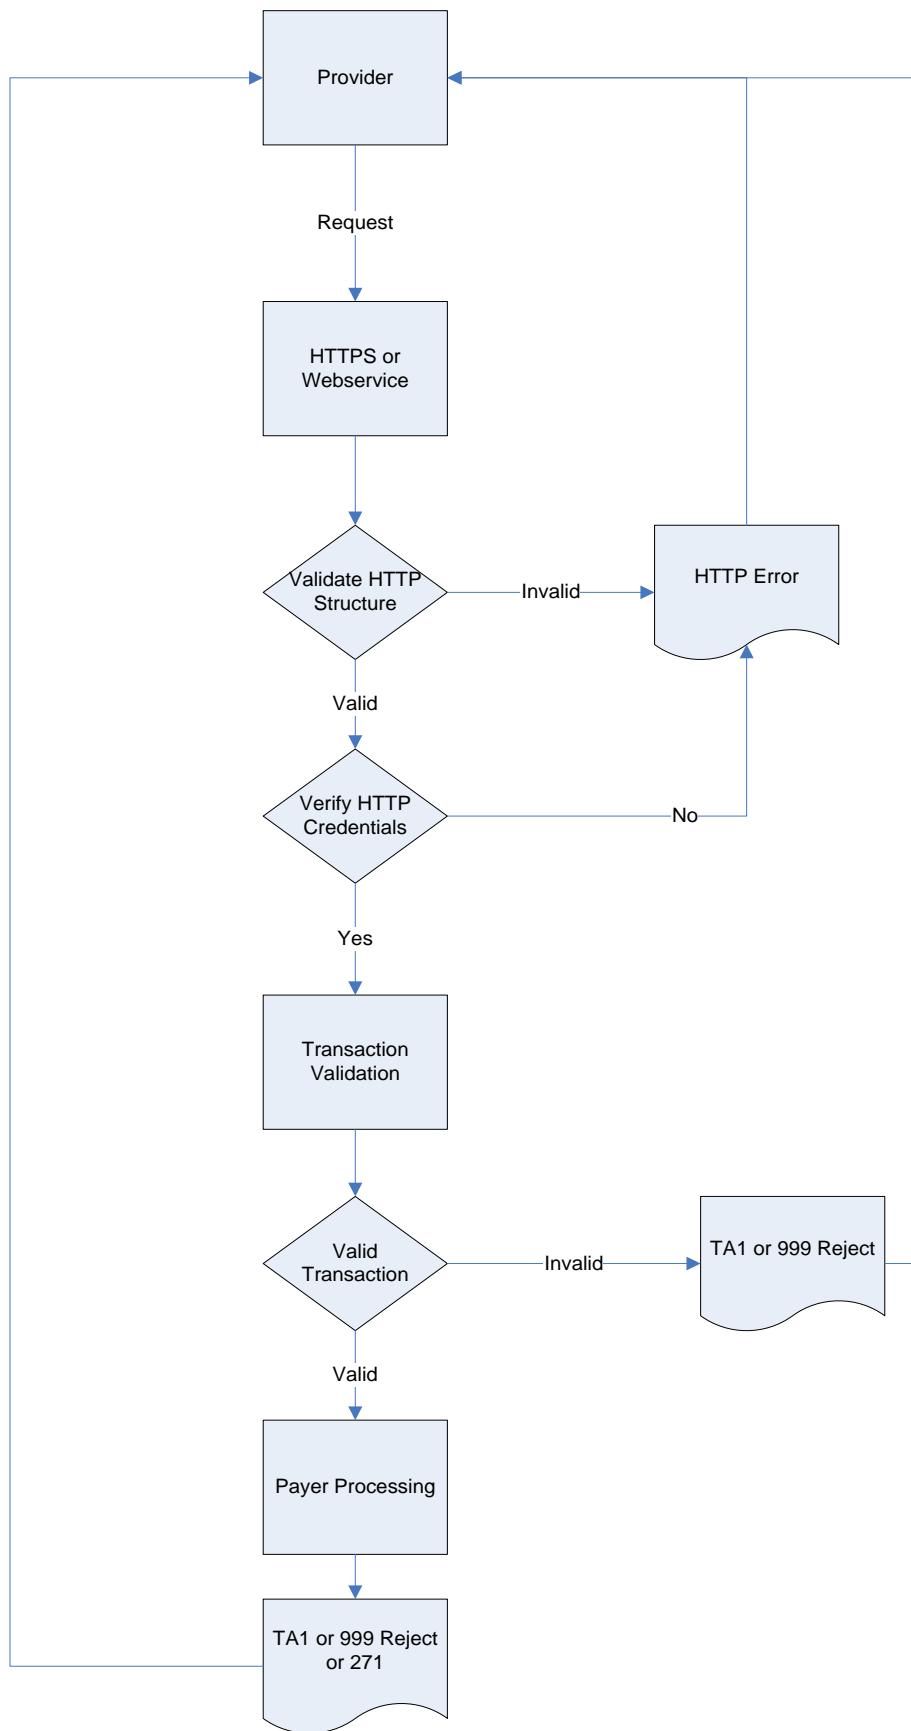

EDI syntax integrity testing – Testing the EDI file for valid segments, segment order, element attributes, testing for numeric values in numeric data elements, validation of X12 or NCPDP syntax and compliance with X12 and NCPDP rules. This will validate the basic syntactical integrity of the EDI submission.

Type 2

HIPAA syntactical requirement testing – Testing for HIPAA TR3 specific syntax requirements, such as limits on repeat counts, used and not used qualifiers, codes, elements and segments. Also included in this type is testing for HIPAA required or intra-segment situational data elements, testing for non-medical code sets as laid out in the TR3 and values and codes noted in the TR3 via X12 code lists or tables.

4. CONNECTIVITY WITH THE PAYER

Communications Process Flow

5. CONTACT INFORMATION

Customer Service

For Questions About	Contact	Telephone Number Fax Number E-Mail Address Hours of Operation
Connectivity, Reporting, Acknowledgements or any additional questions or assistance	Gateway Center (MGD Vendors Only) or Service & Support Center	<p><u>MGD Vendors:</u> Phone: 877-309-4256 Email: gatewaycenter@enshealth.com</p> <p><u>All others:</u> Phone: 866-367-9778 or direct 719-457-8383 Email: tsupport@enshealth.com</p> <p><u>Hours of Operation:</u> Monday through Friday (excluding holidays) 7:00 AM to 12:00 PM and 1:00 PM to 5:00 PM MST</p>

6. CONTROL SEGMENTS

ISA-IEA

The ISA segment terminator, which immediately follows the component element separator, must consist of only one character code. This same character code must be used as the segment terminator for each segment in the ISA-IEA segment set.

Transactions **must** contain a single ISA-IEA per real time transaction.

Page #	Loop ID	Reference	Name	Codes	Length
C4	ISA	ISA06	Interchange Sender ID	<Sender ID>	15
C5	ISA	ISA08	Interchange Receiver ID	841162764	15

GS-GE

Page #	Loop ID	Reference	Name	Codes	Length
C4	GS	GS02	Application Sender's Code	<Sender ID>	
C5	GS	GS03	Application Receiver's Code	841162764	

7. PAYER SPECIFIC BUSINESS RULES AND LIMITATIONS

Search Options

The 270 transactions have the flexibility for allowing a variety of patient information. In the tables below, you will find that multiple Search Options are defined. The data elements are then listed in conjunction with the Loops and Segments that are required. Payer edits for specific fields are also documented, i.e. fields that require numeric or alphanumeric elements.

Data element usage can be found in the Segment fields in the tables below. **Required** - means that the data element is required by the Payer for every request. **Optional / Situational** - is based on the Payer's search preferences in order to further assist in the member inquiry. Please keep in mind the more information that can be provided, the more likely the information source will find a match in their system.

Patients may be identified in either Loop 2100C or 2100D. If the Patient has a unique ID number then that person should be considered the Subscriber. Only Loop 2100C should be sent for identification purposes.

If the Payer does not assign a unique identifier then the Subscriber and Dependents must be identified in Loops 2100C and 2100D.

Data Usage

There are two levels in which the 270 transactions are divided:

The Header Level contains the transactions structure information; i.e. ISA and GS Segments.

The Detail Level contains specific insurer, insured, dependent and requestor information. There are four different ways in which the Segments are utilized. Each HL is assigned a number identifying its purpose.

Loop 2000A – Information Source – Contains Payer Information.

CIC Payer ID should be used to properly route requests to the Payer. For the current Payer's list, go to www.enshealth.com and click on Payer Lists | Real-Time Eligibility Payer List.

Loop 2000B – Information Receiver – Contains Medical Service Provider Information

This is where the Submitters will identify themselves to the Payer by using either their assigned National Provider Identifier, Payer assigned Provider Identifier or Federal Tax ID Number.

Loop 2000C – Insured / Subscriber Information

This loop is used to identify the Insured Member/Subscriber data elements. Only loop 2100C must be sent for identification if the Patient has a unique identifier.

Loop 2000D – Dependent Information

This loop is used to identify Dependent data elements. If the Payer does not assign a unique identifier then the Subscriber and Dependents must be identified in loops 2100C and 2100D.

8. ACKNOWLEDGEMENTS AND OR REPORTS

Real-Time

On submitting a 270 transaction, you will receive only one of the following responses:

- A TA1 transaction will be returned when the ISA-IEA envelope in your submitted 270 transaction cannot be processed.
- A 999 transaction can be returned when it's determined that the submitted 270 transaction does not pass Level 2 HIPAA validation.
- A 271 response transaction is returned in all other cases. This will indicate the member's coverage or contain a AAA error segment.
- **Disclaimer:** Information provided in a 271 is not a guarantee of payment or coverage in any specific amount. Actual benefits depend on various factors, including compliance with applicable administrative protocols; date(s) of services rendered and benefit plan terms and conditions.

File Specifications

- TA1 - The TA1 will contain an ISA segment as a header and will contain 1 or more TA1 Segments as described in HIPAA TR3 and have an IEA Segment as a trailer.
- 999 - The 999 will contain an ISA segment header and IEA trailer and then contain Segments as described in the TR3.

9. TRADING PARTNER AGREEMENTS

- Trading Partner or contractual Agreements specify the terms and conditions by which transactions are exchanged electronically with CIC. This Companion Guide may be an addendum to a new or existing Trading Partner or Contractual Agreement.
- It is required in the CORE mandate that each transaction be limited to 1 request per file and CIC agrees with this limitation. Batch requests are not supported by CIC at this time.
- While CIC supports all of the characters in the extended character set, it is recommended that incoming

- 270 data uses the basic character set as defined in Appendix A of the TR3.
- The Subscriber Hierarchical Level (HL Segment) must be in order from one, in increments of one (+1) and must be numeric.
- Only multiple data loops or segments should be populated with the first occurrence and each loop or segment populated consecutively thereafter. There should be no Loops or Segments without data.
- Delimiters must be consistently applied throughout the transmissions. Any delimiter can be used as long as the same one is used throughout the transmission. Printable characters are preferred. Delimiters that are chosen should not be contained within the data.

10. ADDITIONAL INFORMATION

State of Minnesota Requirements:

If you are a submitter that will be trading EDI transactions via OPTUM to the State of Minnesota, please see the information below and follow the link for the requirements to comply with the State of Minnesota:

“The transaction-specific information for entities subject to Minnesota Statutes, section 62J.536 and related rules is incorporated by reference from the applicable Minnesota Uniform Companion Guide (MUCG) at: <http://www.health.state.mn.us/auc/guides.htm> Readers are referred to the MUCG for information and instructions to comply with Minnesota’s requirements.”

11. PAYER SPECIFIC INFORMATION

These tables include data elements requiring specific information for payer processing as well as notes pertaining to how payers process the values submitted in certain data elements.

AARP

Effective August 18, 2012 format requirements for the Subscriber ID have changed.

Subscriber ID (loop 2100C, NM109) must contain one of the following:

- A minimum of a three character alphabetic prefix followed by alphanumeric characters for a maximum of 17 characters
- An R followed by exactly 8 numbers
- An H followed by exactly 8 or 10 numbers

If the Subscriber ID is not formatted correctly the submitter will receive a 271 with AAA*42.

This change will cover all identifiers for Florida Blue members (the 'H+8' and H+10 is the only exception), out-of-state members from Other Blues Plans and FEP members.
